

Green spider USB Key OS english

Header 1

Free-Solutions OS / Green Spider :

What it is and what it is not :

Green Spider is the release name of Free-Solutions OS. It is pure GPL/GNU Linux based on Debian- Ubuntu/Kubuntu. Works in most PC & Mac Hardware

So usual GPL licence and restrictions applies for the key and its entire content.

Green Spider is not a Brand, just a release name that associate an animal with a color. Green Spider make sense as this first key enable great

recycling for Old Hardwares, so a green way to surf the web.

It is a full OS running into a USB Key. In other words your entire PC is within the Key and can run on any hardware. Free-Solutions is selling and delivering the pre-configured and ready to use USB-KEY

NEVER - NEVER Unplug the key while running. Ensure PC is powered down before retrieving your key even if you do a force shutdown.

If you have any problem, do a hard reboot before removing the key

[Preconfigured application list](#)

Sandisk Ultra Fit	HP DV6 Touch Screen
-------------------	---------------------

Boot sequence

1-Boot from USB Check and find correct key to press at boot

Make sure you are booting on USB, check BIOS if necessary

Check this document / USB [Boot howto](#) See table at the end of this document :

Start your Boot menu(check boot howto)	Choose USB device too boot on
----------------------------------------	-------------------------------

If you start on USB, you get into the following menu :

Kubuntu Boot menu, use default

If you do not have this menu, double check USB boot howto instructions for your computer

Choose default Persistent live, or wait

-Drink a coffee, be patient your system is loading (3mn-till 10mn on old HW, first time)

-Wait for green spider to show up on your screen

Green spider USB Key OS english

You will go through several states, Black screen at boot is normal, cursor is blinking, just wait until You get Login Screen

After 3 to 10 min you get the **login screen**, be patient on old machines as

HW config is built on the fly at first boot

Login Screen :

By default, **password=12345678**, feel free to set a Password to lock your Key

Then

And finally you enter your session, your computer is ready to use, have fun

Maintenance :

You need to do a File Système check to correct inode and file ssystem errors

To check and correct disk errors :

-Boot "live" : 3rd option from boot menu

-Open a terminal and :

type or cut and paste

```
sudo su
```

```
setxkbmap ch
```

```
fsck -y /dev/sdb5
```

fsck is correcting any disk inconsistencies, needs to be done every 1-3 month

Patches :

Apply Patches , currently [Patch 1](#) & [Patch 2](#)

Software upgrade :

Once Patch are applied, perform Software upgrades via discovery app or Open a Terminal and do :

```
sudo apt-get update
```

```
sudo apt-get upgrade
```

USB Key and instructions for each vendor

Below is a list of PC brands with their corresponding hot-keys.

Manufacturer	Type	Models	Boot Menu	Boot Once	BIOS Key	Change Priority
ACER			Esc, F12, F9		Del, F2	
ACER	netbook	AspireOne, Aspire Timeline	F12		F2	
ACER	netbook	Aspire v3, v5, v7	F12	The "F12 Boot Menu" must	F2
