Why collaborate with Free-Solutions Sàrl ?

We have the **expertise** to offer you **creative**, **innovative** and **effective** **solutions** based on latest technologies (**Web 2.0**) to address the needs of your IT projects.

Our products will **increase** your teams' **productivity**, and this in every aspect of their work. There will be **notable savings** in **costs**, consequential **budgeting**, as well as the **quality** enhancement and in the **time** needed for the team to bring the project to its conclusion.

These solutions are utilized, tested, and **approved** daily, by the leaders in computer technologies. (**Jive Software customers list**)

Why Clearspace ?

🌑 Clearspace is a collaboration-based solution that **interconnects its users, via the Web, in intelligent work spaces**. These spaces of **communication** and sharing of knowledge are ideal and indispensable to the success of projects.

🌑 The collaboration is **decentralized** and **security safe**.

🌑 The solution **replaces to advantage all the traditional tools** used until now, from the point of view of **efficiency, security,** and **flexibility**.

🌑 A Clearspace **community** is up and working within a few minutes with **no need for the intervention** of a technical **expert**.

🌑 **Learning** Clearspace is very **easy** and not puzzling. For the **user, i**t is similar to **standard** software**.**

🌑 The application is quite **user-friendly** and **intuitive.** It is appreciated by **administrators** and **managers.**

🌑 It includes the tools for **versioning** and work flow.

🌑 The **search engine**, **AJAX** technology, allows finding the required information **instantaneously**.

🌑 Clearspace comes with an option, solution **Openfire**, an instantaneous, professional and secure messaging server (see below).

🌑 **Minimal cost for a business license**

Why Openfire for Businesses ? (Instantaneous Message Server)

■ Openfire is currently the most popular solution for **instantaneous** for **businesses.**

■ It is **professional** and includes the tools and the **original** applications which control all aspects of the **exchanges** in **real time.**

■ **Communication** is secure between the ensemble of the collaborators **within and/or outside** the network of the business.

■ All the IM (instant messaging) toolscan be **integrated** with **Clearspace**, in order to **interact** with connected users.

■ **Conferences** and interaction spaces for multiple users (chat rooms)

■ Interlocutors enter automatically and **directly** in contact with the **appropriate resource**. Efficacious for **support** and sales services.

■ Copies and **exchanges of files** of printscreen, etc.

■ **Checking** and **archiving** of interactions.

■ **Managing the users** and the ensemble of the communication space by the console Openfire.

■ Possibility VoIP linking **telephony** with the instant message server via Asterisk.

■ **Minimal cost for a business licence.**

This solution will allow your business to start using a Clearspace and Openfire server in just a few minutes.

Why CVS ? (Concurrent Versions System)

■ This is a **management of versions** tool particularly well adapt to **Triple'A/OCS.**

■ This permits **collaborative development** among the various participants.

■ Authorizes **rollbacks** (return to earlier versions)

■ Checks the **rights** of users.

■ Permits precise **tracing** of **modifications**, of **changes** in the code, of easy **detection** of errors and
the **efficacious correction.**

■ The **installation** and the **deployment** code being produced are entirely **automated** checked by the versioning server.

■ Transfers files among **all the systems** (PC MS-Win and Unix©)
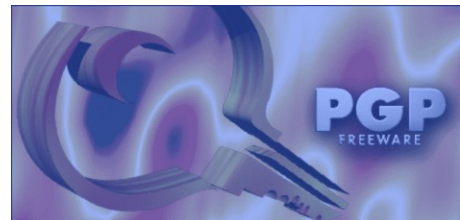

■ **No software costs**

Why Rsync ? (Remote synchronisation)

● **Rapid restoration** and **replication of the data base.**

● Possibility of **secured** replication via **ssh.**

● Saving **(backup)** , with an important **gain** in real **time** when processing batches. Up to **1000X faster** than a traditional backup system.

● No need for temporary disk space for storing backup files, resulting in **space saved on the disk**.

● Replicate your **configuration** of **PROD** on a **TEST** server in **a few minutes.**

● It is also possible to replicate the entire configuration of PROD on the annexed system, in order to carry out the treatment of the database (**reporting** for example) **without bothering** the **PROD** users.

● **No software costs**

Why PGP ? (Pretty Good Privacy)

● The sending of e-mails contains no guarantee of **confidentiality** nor of **integrity.**

● More or less **sensitive information** circulates daily via e-mail and this endangers the **security** of the organization.

● PGP guarantees that **only the recipient** will be able to **decrypt** the message and to **verify** its origin.

● E-mailing becomes, thanks to PGP, a **totally secure** and **reliable tool**, adapted to confidential communication.

● PGP **easily integrates** the clients usual messaging (Outlook, FireBird, etc.) and remains very **user friendly.**

● **No software costs**

Free Solutions Sàrl offers a solid experience in the installation of electronic mail security.
